

LOGO INSERTS

Recycle Logo Inserts

Lakeland Mold's recycle logo inserts are an easy way to install a recycle logo without causing any damage to the casting by heavy stamping. They are available with three sizes of logos and a variety of material designations. By adjusting the depth of the mounting spot-face, the logos can be either raised or recessed on the part. Inserts are machined from 6061 aluminum, CNC-engraved, and stamped to a depth of .015. Plain inserts, stamped with the arrows only, are also available and any designation can be added to them.
