

CODE WHEELS

MWA-2000

Month-Year Date Code Wheel

Our most popular date code wheel! The month-year code wheel was developed to furnish molders with a simple way to track production runs. The wheel can be easily mounted in any casting. The arrow pegs are interchangeable and come both with and without the year. By adjusting the depth of the mounting spot-face, the figures can be either raised or recessed on the part. The date may be changed by simply loosening the locking nut, turning the arrow peg to the desired position and retightening the nut. When installing in steel molds, a steel shim spacer should be added.

Ordering Information

MWA-2000 Month/Year Date Code Wheel Assembly

MW-2000 Month Code Wheel

AP-YEAR Arrow Peg (specify year when ordering)

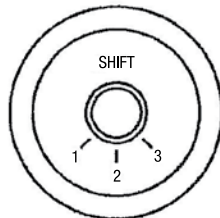

Note: Assembly includes 3/4-10 and 3/8-16 jam nuts, 3/8" lock washer and arrow peg.

Shift Code Wheel

The shift code wheel offers molders the ability to track production by run shift. Installation and operation is similar to the other code wheels, the outer dimension being the same size. Repositioning the arrow is simply a matter of loosening the jam nut, rotating the wheel to the desired position, then retightening the nut.
